

## MULTI PROPUSE TREATMENT

### **Product Summary:**

This nanotechnology-based product creates a durable non-stick coating for various surfaces, preventing dirt and impurities from adhering. It exhibits high hydrophobicity, excellent "easy to clean" properties, and is compatible with food contact. The coating is invisible to the naked eye, permanent, and resistant to temperature variations.

### **Usage:**

Ideal for plastic, resin, plexiglass, car bodywork, acrylic or stainless sanitary ware, shower screens, bathtubs, window frames, and patio furniture.

### **Application:**

Apply at temperatures between +5°C and +30°C, avoiding direct sunlight. Ensure the surface is clean, free of grease, silicone, and wax. Apply the treatment, spread evenly, and let it dry for 30 minutes. Full drying occurs after 24 hours.

### **Maintenance:**

Treated surfaces can be easily cleaned with water. Use of other cleaning products is discouraged, except for a recommended UNIVERSAL CLEANER.

### **Longevity:**

The treatment remains effective for several years under normal use and without aggressive cleaning agents, thanks to UV stability and chemical bonding.

### **Advantages:**

Longevity: UV stability ensures a long-lasting effect.

Abrasion resistance: The treatment is highly durable.

Chemical stability: Resistant to most household and industrial cleaners.

Storage:

Store in unopened packaging at temperatures between +5°C and +25°C, away from direct sunlight. Seal opened containers tightly.
